

ABSTRACT

A rotatable book holder includes a housing having a chamber to rotatably receive a rotary member which has a number of holes. A pole includes lower portion secured to the rotary member, and a plate is secured to an upper portion of the pole and includes a number of holes facing toward the holes of the rotary member, to receive shanks of books, and for allowing the books to be rotated relative to the housing in concert with the rotary member, and thus for allowing the books to be easily viewed or read by the users. The housing includes a weight to rotatably support the pole and to increase a stability of the housing.
